

Odosense[®]

Odour Monitoring System

About Odosense®

Odosense® is an E-nose-based Odour Monitoring system designed to monitor various odourful and toxic gases. It offers real-time monitoring of odourful parameters such as Sulphur Dioxide (SO₂), Hydrogen Sulfide (H₂S), Ammonia (NH₃), Methyl Mercaptan (CH₃SH), Total Volatile Organic Compound (TVOC), Formaldehyde (CH₂O), Nitrogen Dioxide (NO₂), Chlorine (CL₂), Temperature, Humidity and Pressure. The data collected can be visualised in the Envizom environmental monitoring platform in different values like ppm, ppb, µg/m³ and Ou (odour unit) in the real-time dashboard. The odour data is useful for different applications, such as Wastewater Treatment Plants, Landfills, Oil and Gas Industries, etc.

Odosense® utilises a combination of sensor technology alongside data analysis techniques to get real-time readings that measure low, medium, and high odour intensity. It technologically provides better accuracy with features including patented e-breathing technology, auto device firmware upgrades, and remote calibration capabilities. Our systems also use AI and machine learning algorithms to provide accurate odour data.

Oizom[®] Gas Sensor

The Oizom[®] Gas Sensor (OGS) module is designed to accurately measure low concentrations of various gases at ppb, and ppm levels in the ambient air. The sensor is capable to monitor the point source gases on real-time basis. Each sensor is integrated into a metal casing along with the ultra-low-noise support electronics, which makes it compact and reliable. This allows accurate gas detection even at very low concentrations in the atmosphere.

1. Proprietary gas sensing technology
2. Independent calibration of each sensor
3. Low-noise electronic design

Data and Calibration

1 Laboratory Calibration

All air quality monitoring systems are calibrated at the ISO/IEC 17025:2017 certified calibration laboratory using standard NIST traceable calibration gas standards as per the international guidelines by U.S. EPA.(Vol II, Section 6.0 Rev.1)

2 Collocation Calibration

Post lab calibration, the monitors are operated adjacent to a custom-built reference station housing U.S. EPA-designated Federal Equivalent Method (FEM) for collocation calibration to ensure optimum data quality.

3 On-site Calibration

On-site calibration of Oizom[®] devices can be performed using standard calibration gas cylinders of known concentration or by co-locating with a reference standard.
